

TRIPLE ACTION 2.0

Features, Indications and Contraindications

The Triple Action[®] Ankle Joint is designed to provide highly adjustable active ankle control of the lower extremity during all phases of the gait cycle. The component excels in the orthotic treatment of complex disorders, such as stroke, multiple sclerosis and cerebral palsy. Ankle alignment, plantarflexion / dorsiflexion spring stiffness and range of motion are independently adjustable to help simplify optimization. The Triple Action should be considered for patients with combined ankle and knee deficits, as well as patients with clinical presentations that may change over time, as with recovery or progression of a neuromuscular disorder.

Features

- Independent adjustment of
 - Ankle alignment
 - Plantarflexion/dorsiflexion range of motion
 - Plantarflexion/dorsiflexion spring stiffness
- Independent adjustment range of +10°
- (4) high stiffness spring options included with booster spring models
- Compatible with unilateral or bilateral orthotic designs

Indications

- Lower limb functional deficits as a result of
 - Stroke
 - Cerebral palsy
 - Multiple sclerosis
 - Spina bifida
 - Spinal cord injury
 - Other neuromotor deficits

Contraindications

- Patient weight greater than 110 kg
- 3A76 - Greater than 110kg
- 3B76 - Greater than 100kg
- 3C76 - Greater than 50kg

GUIDE TO COMPONENT SELECTION

Assistance and orders

For assistance: Please contact Orthotics - orthotics@opchealth.com.au
 For orders: Please email sales@opchealth.com.au

Step 1 | Select system size, unilateral or bilateral, by patient weight:

Triple Action Weight Limits (kg)

System Size	Unilateral	Bilateral
3A76 (19mm)	100 kg	110 kg
3B76 (16mm)	90 kg	100 kg
3C76* (13mm)	40 kg	50 kg

*Requires Companion Joint

Step 2 | Select booster conguration and order number by gait deficit
