College Park designs and manufactures a full line of anatomically correct, custom built prosthetic solutions. College Park is ISO 13485 certified with an extensive focus on quality testing, and proudly sources and produces all products entirely in the USA. With precise engineering and quality manufacturing, College Park is committed to innovating human locomotion solutions for users all over the world.

 **truststep**<sup>®</sup>  
*the ultimate toolbox.*

Original and unrivaled, the Trustep sets the standard for unsurpassed comfort and natural-feeling mobility. It was one of the first prosthetic feet to provide anatomically correct movement in all planes, allowing for nearly the same vertical motion, rotation, and stability as an anatomical foot. With a full range of options available, the versatile design allows for complete customization.

## VERTICAL COMPLIANCE

The offset axis points in the Trustep allow the foot to flex and absorb vertical forces just like an anatomical foot.

## VERTICAL DISPLACEMENT

## TRI-AXIAL TECHNOLOGY

True multi-axial movement occurs on all three planes. The superior plantar flexion, dorsiflexion, transverse rotation, and inversion/eversion make the Trustep one of the most anatomically correct prosthetic feet — allowing for ease of movement, excellent ground compliance, and comfort.

## EVOLUTION

Since its release in 1991, the Trustep has undergone significant changes as new technology emerges. Some of these improvements include aircraft-grade polymer bumpers for unbeatable durability, noise abatement features, and a redesigned lighter, stronger heel.

# ANATOMICAL LOCOMOTION

FROM HEEL STRIKE TO TOE-OFF.

On heel strike, the rear bumper compresses to bring the toe down to foot flat. This gives higher rates of ground contact on declines for firm footing.

During midstance, the front and rear bumpers compress simultaneously to provide cushion. Dual hinge points allow the foot to maintain ground contact throughout the gait cycle.

To ready the foot for a smooth toe-off, the Truststep's front bumper compresses to absorb impact and lift the heel. The rollover shape and contoured toes assist in forward propulsion.

## PATIENT TESTIMONIAL

“After I put my legs on in the morning, I don't take them off until I go to bed in the evening. I've been told that I have a great gait. As a longtime amputee, I've worn many legs, and it hasn't always been like that. I started wearing my Truststeps in 2001 and haven't looked back.”

– Reggie, Truststep user
