

ALPS® SOUTH - LINER SPECIALISTS SINCE 1993

ALPS® South is an American company which has been specializing in the production of prosthetic liners since 1993. Since then we have expanded globally, with offices in 5 countries, a consolidated network of agents and over 160 trusted distributors spread out all over the world.

Thanks to our dedication to innovation, coupled with our eagerness to interpret and even anticipate the needs of prosthetic technicians and wearers, ALPS® has gone far beyond our initial production only of prosthetic liners, and developed a whole range of high-quality prosthetic solutions, including more than 75 registered patents spanning an array of product categories. This catalogue makes it easy to access information about the entire range of ALPS® products to identify the best prosthetic solutions based on both the lifestyle and clinical profile of each individual patient.

PREMIUM QUALITY | 100% MADE IN USA

Investment in innovation, research and quality, both in terms of products and working methods, continues to be a priority here at ALPS®, allowing us to offer premium solutions. The entire production process, from the knitting of fabrics to the manufacturing of the liners, takes place at our St. Petersburg, Florida plant. This means we can assure maximum quality control at every step of production. In addition ALPS® guarantees the quality and safety of its products with certification from some of the most important internationally recognized authorizing institutions. ALPS® has been manufacturing FDA-approved medical devices since 1989. ALPS® products are designed and produced according to ISO13485 and GMP (Good manufacturing practice) standards, meeting the requirements of the EU regulations CEE 93/42 UE and conforming to MDR 2017/745.

ALPS® SOUTH

MAKING LIVES BETTER™

"Making Lives Better™" is the mission which has been driving the company since 1988, inspiring our job every day and pushing us to provide superior products for you and for every prosthetics user.

We pride ourselves on our fair business practices with customers, vendors, and employees alike, while maintaining a brand image that makes our staff, collaborators and end-users of our products all proud to be associated with ALPS®.

USERS FIRST

Throughout the catalog, you can find a unique tool called Choose Your Liner™, which ALPS® has developed to help you identify which prosthetic solutions best suit each patient based on the individual's lifestyle and clinical profile. You will find products specifically tailored to your needs and related suspension systems, applicable in 5 easy steps. Putting the user first helps you choose the best prosthetic solution for each individual.

Choose Your Liner™

Find your ideal prosthetic liner &
more in 5 simple steps.

MATERIAL

EasyGel: contains antioxidants that are an effective scavenger of free radicals and hydroxyl groups. Best for use on amputees with adherent scar tissue, skin irritation, sensitive skin and diabetics.

Grip Gel: tackiness helps in reducing bunching in the popliteal area. Best for use on amputees with healthy skin tissue.

High Density Gel: the relatively firm nature of the HD Gel combines comfort with control and stability. Best for use on patients who are transitioning from a silicone liner to a gel liner.

OptiGel: ALPS® exclusive, white gel that ensures excellent adhesion to the residual limb, making it the optimal choice for higher activity users who demand ultimate comfort, control, and stability.

Silicone

OptiSil (White Silicone)

FABRIC

In house knitted fabric with high quality yarns

Black Fabric with highly reduced vertical stretch

Brown Fabric with reduced vertical stretch

Beige Fabric with both horizontal and vertical stretch

Gray Fabric with increased reduction of vertical elongation

	V.I.V.A.	VIVA	 GripGel	  3 mm 6 mm	The built-in valve evacuates the air in the socket

ACTIVITY LEVEL

HOW TO SIZE LINERS

Measure the circumference of the stump at 6 cm above the distal end. Use the chart to select the size of the liner.

Example: for a measured circumference of 30 cm, select a 28 size liner.

HOW TO SIZE SLEEVES

Measure the circumference of the leg at 10 cm above the center of the knee. Use the chart to select the size of the sleeve.

Example: for a measured circumference of 32 cm, select a 24 size sleeve.

SLEEVES OVERVIEW

PICTURE	NAME	PART #	MATERIAL	THICKNESS	KEY FEATURES
	Anterior Posterior Tapered Sleeve	APS	 HD Gel	 6/3 mm tapered	Gradually tapered from the anterior to the posterior to provide superior comfort
	EasySleeve Fabric Reinforced	SFS	 GripGel	 3 mm 6 mm	Achieves secure suspension by sealing with the skin without restricting circulation
	Reinforced Flex Sleeve	RFX	 OptiGel	 3 mm	30° pre-flexion + an added layer of internal fabric for increased durability
	Reinforced Sleeve	RFS	 OptiGel	 3 mm	Constructed with an extra layer of internal fabric to deliver superior durability

OUR TECHNOLOGIES

ALPS® expertise in the field of chemistry and our position as a leading manufacturer of advanced gel-based medical devices have led to the development of a wide range of prosthetic liners and sleeves over the years, characterized by an innovative and unique product: our patented gel.

ALPS® Gel is a thermoplastic elastomer (TPE) which offers an optimum level of protection against shear forces and other stresses, guaranteeing the perfect combination of control and uniform distribution of pressure within the socket thanks to its characteristic low modulus of elasticity.

ALPS® Gel is far more flexible and resistant with respect to other thermoplastic gels being used in the lower limb prosthetic liner industry. ALPS® Gel offers up to six times the elasticity of other thermoplastic (TPE) gels on the market. It is this important mechanical property that allows ALPS® Gel to guarantee prosthetic leg wearers the comfort, durability, control and safety they need to grant them the mobility and freedom of movement.

Four types of ALPS® Gels to serve the mobility needs of prosthetic leg wearers.

ALPS® makes four types of gels to meet the needs of every individual prosthetic leg user whose requirements vary based on their clinical condition and lifestyle: EasyGel, HD Gel, GripGel, and OptiGel. The full range of ALPS® Gels means that each patient will be able to find his or her own, unique, perfect comfort.

EASYGEL

EASYGEL was the first kind of gel developed by ALPS®. It is characterized by its soft, powdery texture. It is rich in antioxidants that are an effective scavenger of free radicals and hydroxyl groups. Best for use on amputees with adherent scar tissue, skin irritations, sensitive skin and diabetics.

HIGH DENSITY GEL (Silicone equivalent)

Dense, firm texture. Relatively firm nature of the HD Gel combines comfort with control and stability. Best for use on highly active patients who are transitioning from a silicone liner to a gel liner.

GRIPGEL

Smooth, tacky texture. Tackiness helps in reducing bunching in the popliteal area. Best for use on amputees with healthy skin tissue.

OPTIGEL

This exclusive, white TPE gel ensures excellent adhesion to the residual limb, making it the optimal choice for users who demand ultimate comfort, control, and stability.

The choice of fabric used for producing prosthetic sleeves and liners is fundamental for guaranteeing maximum comfort and safety.

This is why ALPS® began manufacturing its own fabrics years ago: to be sure to offer a product that best meets the functional needs of prosthetic wearers. The fabric needs to do more than just protect the materials used in making the liners and extend their durability; it must also be able to generate a greater, lesser or differentiated level of tension depending on the needs of the individual user. ALPS® manufactures and uses five types of fabric: beige, brown, black, gray and knitted.

These five types of fabric are not differentiated merely by color and manufacturing process, they also each have distinctive characteristics and functions in order to provide each prosthetic leg wearer with the specific benefits he or she needs based on individual lifestyles and clinical conditions.

BEIGE FABRIC

Beige fabric stretches both vertically and horizontally

The fabric's stretch allows the liner to adapt to the shape of the residual limb as it moves to guarantee maximum comfort.

BROWN FABRIC

Brown fabric has reduced vertical elasticity

Vertical stretch is reduced by 80% compared to the beige fabric, allowing a greater level of control and stability of the prosthesis. Ideal for active patients.

BLACK FABRIC

Black fabric with greatly reduced vertical stretch

Vertical stretch is 90% lower than the beige fabric, allowing a greater level of control and stability of the prosthesis. Ideal for active patients.

GRAY FABRIC

Gray fabric with increased reduction of vertical stretch

Minimal vertical stretch allows for a high level of control and freedom of movement. Ideal for active patients.

KNITTED FABRIC

ALPS® years of experience in manufacturing fabrics has played a fundamental role in the development of our latest innovation: products created using ALPS® knitted fabric.

Our latest fabric manufacturing process has allowed us to:

- Create products totally devoid of any stitching
- Maintain control of the tension in each section of the liner to maximize and reduce the effects of pistoning
- Integrate a matrix in the distal construction of our locking liners
- Integrate a distal matrix to limit elongation / U matrix or Regular Matrix

ALPS® has introduced innovative and skin friendly silicone prosthetic liners for lower limb amputation.

These liners provide a solution to some of the clinical problems and disadvantages of silicone in skin-contact applications due to the inherently high coefficient of static friction typical of silicone polymers.

ALPS® expertise in processing silicone allowed our engineers to come up with a new manufacturing method which improved the friction characteristics of the silicone prosthetic liner.

The surface of the prosthetic liner has been modified, to create micro craters that reduce the static friction without any additives, resulting in a completely skin friendly silicone.

Silicone with the modified surface layer shows a reduction of 80% of the coefficient of static friction, as shown in the graph below.

Friction Testing

ALPS® Silicone liners are manufactured using pure silicone. This makes our silicone liners suitable for a wide range of amputees, including elderly and vascular patients with a lower limb amputation.

The silicone products stand alongside our other liners manufactured in EasyGel, Grip Gel, High Density Gel (Silicone Equivalent), and the newest OptiGel.

ALPS® silicone is lightweight, hypoallergenic, cool and additive-free and creates only one-fifth the friction of normal silicone. The technology used to create this particular silicone is of fundamental importance, allowing ALPS® to design and produce silicone liners for prosthetic legs which can guarantee:

- Freedom of movement
- Maximum gentleness on the skin
- Cooling effect
- Ease of cleaning

Inspired by Nature. Empowered by Technology.

NRG™ - Natural Reactive Gait - is a patented innovative dynamic response foot technology designed to replicate the natural movement of the calf and shin muscles.

ONE FOOT, MULTIPLE POSSIBILITIES.

KEY FEATURES

Unique multilayer construction

Exclusive and patented reverse shank design

Advanced flexible ergonomic design

KEY BENEFITS

- Physiological and energy efficient gait
- Smooth rollover during the whole gait cycle
- High dynamic response to support an active lifestyle
- Possibility to do a wide range of activities with just one single foot
- Ground compliance and stability on all terrains
- Reduction of secondary issues thanks to a more balanced posture and symmetrical gait
- Low maintenance
- Lightweight
- Waterproof

HOW ANTIOXIDANTS WORK

ALPS® EasyLiner® contains an antioxidant that is an effective scavenger of free radicals and hydroxyl groups.

Beneficial effects to the skin of patients have been reported. These stories have been provided here as anecdotal evidence of the benefits that some patients have reported.

DIABETIC AMPUTEE

Case history provided by: Jim McElhiney, CPO, Nashville (USA).

This patient is a severe diabetic, insulin dependent with compromised vascularization. A local hospital called Jim McElhiney, CPO in Nashville (USA), to evaluate this patient.

The first two pictures have been taken prior to the fitting by Jim McElhiney. The patient had been out of her prosthesis for 3 weeks and was being treated with wet and dry dressing. She was then fitted with ALPS® EasyLiner® (Cushion Liner) and ALPS® Easysleeve (Sealing Sleeve), creating a suction suspension system.

Before the fitting
with ALPS® EasyLiner®.

One week post initial fitting
with ALPS® EasyLiner®.

Three weeks post initial fitting
with ALPS® EasyLiner®.

PATIENT WITH DERMATITIS

Case history provided by: Wayne Sadler, CPO, Kentucky (USA).

This patient has been diagnosed with Contact Dermatitis. He followed the simple cleaning procedures as recommended by the manufacturer.

When that wasn't enough, he started using our product, these are the results.

Prior to fitting
with ALPS® EasyLiner®.

One week post fitting
with ALPS® EasyLiner®.

A DIFFICULT RESIDUAL LIMB

Case history provided by: Palgi Orthopaedic, Israel.

Before, when wearing a silicone liner.

After, when fitted with ALPS® EasyLiner® during 4 weeks.

PROSTHETIC LINERS

A SECOND SKIN

A prosthetic liner serves to cover and protect the residual limb like a second skin and plays a key role in the suspension system of the prosthesis, increasing comfort and minimizing the risk of skin irritations. ALPS® complete range of prosthetic liners is designed to focus on the needs of the individual to offer all users the best possible solution based on their specific needs.

EasyLiner®

Patent No. 6,454,812* | 7,709,570 | 7,709,570

ALPS® EasyLiner® contains a prolonged-released antioxidant, an effective scavenger of free radicals and hydroxyl groups, with beneficial effects on the skin.

It provides the softness, strength, and cushioning from its use of ALPS® EasyGel, relieving the residual limb from the stress created by vertical and shear forces. It delicately conforms to the shape of the residual limb without restricting blood flow. It can be easily donned even by geriatric patients and users with reduced manual dexterity.

Silicone PRO Liner

Patent No. 5,507,834* | 6,454,812*

The Silicone PRO liner is manufactured with medical grade hypoallergenic silicone. The surface of the silicone features a low coefficient of static friction (1/5 of regular silicone). Without any additives, it is a hypoallergenic liner, very delicate on the skin. The liner is extremely lightweight and promotes the skin's natural thermoregulation.

The locking version features an innovative U matrix to limit vertical stretch while not constraining the residual limb.

Superior Performance Liner

Patent No. 6,454,812*

ALPS® Superior Performance prosthetic liner combines a limited vertical stretch fabric with our Grip Gel.

Grip Gel, with its softness, strength, and cushioning provides the greatest possible protection to the residual limb. The fabric, with its limited vertical elongation, improves control and stability of the prosthetic leg by reducing pistoning. The result is a comfortable liner, indicated for patients with low and medium activity levels.

Superior Performance HD Liner

Patent No. 6,454,812*

ALPS® Superior Performance prosthetic liner, in its HD Gel version, provides the patient with comfort and control.

The HD Gel provides relief to the residual limb from vertical and shear forces; at the same time, it makes the liner more compact. The fabric, with its limited vertical elongation, further limits the vertical pistoning.

ALPS® Smart Seal liner features integrated, silicone coated sealing bands that create a safe interface.

The bands stretch against the socket wall, preventing the liner from slipping.

The inner HD Gel layer, thanks to its low modulus of elasticity, easily conforms to the residual limb without restricting the blood flow.

It is available in two configurations with different sealing band heights.

Extreme™ Liner

Patent No. 6,454,812*

The ALPS® Extreme prosthetic liner combines softness, strength, and cushioning from our Grip Gel with a fabric with limited vertical stretch. It improves the control of the prosthetic leg and reduces pistoning, while still providing superior protection of the residual limb. The superior adhesion of the Grip Gel allows the safe suspension of the prosthetic leg. The result is a comfortable and versatile liner, indicated for patients with low and medium activity levels.

Extreme™ HD Liner

Patent No. 6,454,812*

ALPS® Extreme™ prosthetic liner, in its HD Gel version, provides the patient with comfort and control. The HD Gel relieves the residual limb from vertical and shear forces; at the same time, it makes the liner more compact. The fabric, with its limited vertical elongation, further limits vertical pistoning. This makes it an ideal liner for the most active users who are looking to maintain maximum control of the prosthetic leg without compromising comfort.

EasyFlex™ Liner

Patent No. 6,454,812* | 7,709,570 | 8,226,732 | 8,246,694 | 8,349,021

ALPS® EasyFlex™ prosthetic liner allows users ease of knee flexion thanks to an unlimited restriction of stretch anteriorly. Posteriorly the fabric, with its limited vertical stretch, improves the control of the prosthetic leg. The prolonged-released antioxidant contained in the EasyGel is an effective scavenger of free radicals and hydroxyl groups, providing beneficial effects on the skin. The EasyFlex™ Liner is designed for use with a pin and lock suspension system.

Reinforced Flex Sleeve

ALPS® Reinforced Flex prosthetic suspension sleeve delivers the same qualities as our popular SFX but with an extra layer of durability. While the OptiGel and gray knitted fabric combine to supply maximum comfort and high performance, the RFX also features an added layer of internal fabric to offer increased durability around the trim line of the user's socket. At the same time, the sleeve provides a 30° pre-flexion to ease bending and reduce bunching behind the knee, making the RFX an ideal choice for active users.

Superior Suspension Sleeve

ALPS® Superior Suspension Sleeve provides superior comfort thanks to its use of ALPS® Gel.

The Gel adheres to the amputee's skin to achieve secure suspension without restricting circulation and without causing shear forces.

With its thinner profile, the SFB, is the ideal choice for patients who want a lightweight product with reduced bulk.

V.I.V.A. Sleeve

Patent No. 6,361,568*

ALPS® V.I.V.A. Sleeve is a prosthetic gel sleeve with a built-in valve to evacuate air from the socket to ensure superior security.

It provides suction suspension without the need to create a valve in the socket.

Once the sleeve is donned, the valve should be located proximal to the patella to create back pressure with knee flexion.

Vacuum Integrated Pump

Patent No. 8,197,555 | 11,224,527 | 8,197,555 | 11,224,527

The ALPS® VIP™ is an air expulsion integrated pump for elevated vacuum. Its use provides patients continuous total contact when donning the prosthesis. This is essential for an even weight distribution and to distribute the suspension of the prosthesis over the whole surface of the residual limb. Elevated vacuum created by the VIP™ stabilizes the residual limb, overcoming all issues connected with the residual limb changing volume during the day.

Key Benefits

-  Efficiently deals with residual limb volume fluctuation which in turn leads to improved prosthesis control and comfort
-  Reduces the intensity of peaks in pressure on the patient's limbs, improving comfort and providing greater freedom of movement
-  Helps preserve residual limb skin health by improving circulation and consequently increasing limb oxygenation
-  Quiet, light, and does not affect the cosmetic appearance of the prosthesis
-  Easy to install and battery-free

Vacuum Integrated Pump VIP™ Part Number and Optional Complementary Products.

Available in 2 different vacuum levels: HIGH VACUUM (Red) 10-13 in of mercury and LOW VACUUM (Green) 5-8 in of mercury. Choose vacuum level on the basis of activity level and skin condition.

Lock with Pyramid

Patent No. 5,507,837*

The ALPS® Lock with Pyramid is an all-in-one lock body design which combines the lock and pyramid. The glass reinforced nylon lock body exhibits better wear characteristics than delrin or aluminum. The convenient one-way gear allows the user to push in or wind out the limb into the prosthetic socket. A unique feature of this lock is that if foreign material or clothing get caught in the gear, the housing can be removed, freeing the pin.

Key Benefits

For laminated sockets

All-in-one lock body design combining the lock and pyramid

Infinite pin adjustment reduces play

The housing can be removed, freeing the pin

Prosthetic Socks

ALPS® prosthetic socks are light and soft, extremely comfortable with a perfect fit. They are made with technologically advanced fibers, highly effective in moisture management, that wick away perspiration so it can easily evaporate. This advanced fabric means that socks maintain their original quality for a long time, without getting misshapen or matting up.

Available with without distal hole (N), with distal hole (H), or with a reinforced distal hole (HR):

Choosing the best sock to suit your needs is easy with ALPS® socks' color-coded thickness indicator:

1 ply ● 3 ply ● 5 ply ●

Key Benefits

Assists with volume fluctuation

Keeps its shape over time; minimal stretch and will not mat down

Technical fibers allow a cool, comfortable wear

Light and soft, extremely comfortable

SOCKS ARE AVAILABLE IN BUNDLES!

Contact your sales representative for details on all available bundle options.

Prosthetic Socks KC. Sizing Chart.

DIRECTIONS FOR SIZING

1. Measure from the distal end of the residual limb to the top of the prosthetic socket. The length of the correct sock should be approximately 2 inches more than this measurement.

2. Measure the “distal circumference” 2 inches up from the bottom of the distal end.

Skin Reliever

The ALPS® Skin Reliever eliminates shear forces, friction, and prevents abrasions on the skin of the stump.

It also accommodates volume fluctuations over the life of the prosthesis.

There is no need to make a new socket, ALPS® Skin Reliever can be worn under silicone, gel, and pelite liners.

Key Benefits

Reduces shearing and abrasions

High elasticity

Replaces pelite and socks

Softens and soothes the skin

Contains an antioxidant for use on delicate skin

Skin Reliever ENCP. Sizing Chart.

Measure the circumference of the stump at 6 cm above the distal end.

Antioxidant Cream

Patent No. 10,543,167 | 11,478,419

ALPS® Antioxidant Cream contains antioxidants that are effective scavengers of free radicals and hydroxyl groups. May assist with soothing pain, itchiness and irritated skin. Can be applied on stumps with sensitive skin as it stimulates skin regeneration process. Its moisturizing power improves skin elasticity.

Recommended for use with all liners.

Key Benefits

Soothes Pain, Itch, and Irritation

Stimulates Skin Regeneration

Improves Skin Elasticity

Great for Sensitive Skin

ANT-C50 BX12	50 ML	BOX OF 12

Silicone Skin Lotion

ALPS® 100% Silicone Skin Lotion helps to soothe dry, sensitive skin. It is hypoallergenic, with no perfumes or dyes, and minimal residue. Can be used sparingly to relieve dry, cracked skin conditions.

Key Benefits

Hypoallergenic and skin friendly: formulated to soothe and hydrate sensitive skins without oily feeling

Simple use: apply a few drops of lotion on the skin or on palm of the hand and massage until completely absorbed

Concentrated: a few drops are enough to relieve dry and cracked skin conditions

Without soap or dyes: 100% free of soaps and dyes that could be aggressive

Product Code

Prosthetic Lubricant

ALPS® Prosthetic Lubricant is used to help in donning gel and silicone prosthetic liners. It allows the amputee to don the liner or sheath easily while eliminating the sticky feel.

Key Benefits

Helps the placement of the liner in the socket

Easy application in 3 fast steps: Turn the liner inside-out - spray the lubricant on the external surface - unroll the liner over the stump

Eliminates the sticky feeling and is recommended for use with all liners

Contains 70% isopropyl alcohol for quick evaporation

Product Code

PRODUCT NO.	AMOUNT	QUANTITY

Prosthetic Cleanser

ALPS® Prosthetic Cleanser is a non-alkaline, soap-free cleansing agent designed to help remove dirt and excess perspiration from prosthetic liners and sleeves. Its unique formula allows it to work efficiently with hand washing or machine wash settings to effectively clean and restore items back to their original state.

Key Benefits

Developed to remove dirt and excess sweat from prosthetic liners and sleeves, either by hand or in the washing machine. It is recommended for use with all liners

Suitable for sensitive skin: thanks to its delicate formula it can also be applied to the areas of the skin that come into contact with the prosthesis

Without soap or dyes: 100% free of soaps and dyes that could be aggressive

Balanced pH: the non-alkaline silicone-based formula soothes the skin and does not damage the liner.

Prosthetic Anti-Perspirant*

The first anti-perspirant truly designed for prosthetics. Created to help manage the continuing problem of perspiration, it has been formulated with twice the Aluminum Chlorohydrate found in over the counter anti-perspirants. Recommended for use with all liners.

Key Benefits

Manages issues of continuous perspiration

Made with twice the amount of Aluminum Chlorohydrate

Simple to use, fine mist sprayer with clear dust cap

Recommended for use with all ALPS gel liners

Product Code

PadSil

The Padsil was developed to increase patient comfort in combination with ALPS® liners. The more active user will appreciate the additional cushioning, softness, and durability. Users who experience volume changes will also appreciate the Padsil's ability to lift the limb back into the proper position. They can be placed at the bottom of the socket or inside a pin locking liner.

Key Benefits

Soft medical grade silicone

Helps maintain total contact

Keeps its shape over time

Easily modified

Blue dummy padsils are available for laminating

PadSil PDS. Sizing chart.

Measure the circumference of the stump at 6 cm above the distal end.

MEASURED SIZE (CM)	SILICONE DISTAL PAD	BLUE DUMMY FOR LAMINATION
14-19 cm	PDS-S	PDSB-S
20-23 cm	PDS-M	PDSB-M

PROSTHETIC FEET

ALPS® BioStep™ range is a breakthrough innovation among dynamic response feet. Active users can experience a high dynamic response combined with a fluid step and stability on all terrains.

ALPS® BioStep™ powered with patented NRG Technology™ is based on a biomimetic design, enabling dynamic patients to perform a wide range of activities with just a single foot.

BIOSTEP[®]

BioStep™ EVO

Patent No. 7,410,503~ | 8,236,062~ | 8,574,314~ | 8,808,395~

Ready for the next adventure.

The most performing among the BioStep™ Family. An all-around foot, with extra shock absorption and increased safety on all terrains, providing a softer connection to the ground.

Suggested for demanding dynamic users searching for the best. Ideal also for hiking and trekking, as well for recreational sport and high impact activities.

Natural, responsive, gently supportive.
